

Professional Expression Assignment 2
CISC 640
Nova Southeastern University

Submit your results as a Word file.

You are an influential technical lead for a company that architects, designs, implements, and maintains the XYZ operating system and corresponding software tools. While having a conversation with your colleagues, Chief Technology and Security Officers, it was mentioned you should be integrating DevOps practices to support XYZ operating systems security.

Give a brief but informative paper on the structure and corresponding value of DevOps for the support of XYZ operating system security. Include examples of data driven decisions that are supported by DevOps.

You may wish to first read the papers posted in the DevOps Module in Canvas.

You must write an essay (word processor document) submitted to Canvas that is not longer than three double-spaced pages submitted to Canvas Assignments in the Professional Expression Assignment 2 category. Your paper should pay close attention to maintaining a consistent flow in form. The document must be well written and should be proofread for detail and accuracy. Double space throughout the document and the font must be Times Roman typeface. Use citations to provide evidence of your analysis. Citations and references must be in APA format. Use 12-point font size for the body of the text.

The written work will be judged based upon the quality of your writing (grammar, word selection, clarity, organization, and smoothly flowing discussion), and your understanding of the content (accuracy, analysis, and synthesis) related to your chosen focus within the assigned topic area.
